

Sani-Zone VS. Fragrance Dispensers

Citron Hygiene's Sani-Zone Air and Surface Disinfection System eliminates odor causing bacteria **at the source**. Unlike regular fragrance dispensers, which release fragrance droplets as a way to **mask odors**, Sani-Zone effectively **kills** odor-causing bacteria.

The chart below illustrates the primary differences between Sani-Zone and regular fragrance dispensers.

Sani-Zone	Fragrance Dispensers
 <p>The system disinfects the air and surfaces</p>	<p>No ability to treat contaminants in the air or on surfaces</p> 
 <p>Uses a combination of Ultra Violet Light and PhotoPlasma to effectively kill and destroy contaminants</p>	<p>No ability to eliminate airborne contamination</p> 
 <p>Sani-Zone treats the air, eliminating harsh odors from the environment by targeting bacteria at their source</p>	<p>Fragrance dispensers mask odors</p> 
 <p>Sani-Zone air purification system is environmentally friendly, eliminating contaminants and odors without harsh chemicals</p>	<p>Fragrance dispensers are chemical-based and require batteries, posing risks to the surrounding environment</p> 
 <p>Annual bulb replacement ensures the unit's efficacy for the year</p>	<p>The unit does not have the ability to remove contaminants. Frequent cartridge replacements are required to remain effective at masking odors</p>
