

PPE Disposal

Prepare your facility for your employees and guests

Why is wearing PPE so important during the COVID-19 pandemic?

Wearing PPE can prevent you from contracting COVID-19 through contact with contaminated surfaces or unknowingly spreading the virus to others.

As employees head back to work, they may be wearing one-time use item such as gloves and masks. Businesses should make sure they are equipped to safely dispose of people's PPE.

Disposing of PPE in a regular uncovered garbage bin can lead to cross contamination.

COVID-19 can last on surfaces for up to 72 hours, lasting the longest on nonporous surfaces like open garbage bins.

Citron Certified Technicians maintain each system on a pre-determined schedule.

A DIN approved germicide designed specifically to treat waste and odours.

Proper removal of PPE educational poster.

Citron Hygiene sends all waste generated through its sanitary, diaper and PPE disposal services to Covanta for waste-to-energy conversion.

The World Health Organization states that these items should be hygienically disposed of using a closed bin.
